Cairo, Egypt

Flutter Developer with +1 years of experience building high-performance cross-platform mobile applications. Proficient in state management, Firebase integration, and applying clean architecture principles. Committed to delivering intuitive user experiences and collaborating effectively to achieve project goals. With a background in cybersecurity and networking, I apply security best practices throughout the development lifecycle. I have a strong understanding of the pentesting process and the investigation/incident analysis workflow, which helps me build applications that are both robust and resilient.

Education

Bachelor Degree of Computer Science at Egyptian E-Learning University

Experience

Cyber Security Internship at CodeAlpha, Remote

January 2025 - April 2025 • [↗](#)

Cyber Security Instructor at Google Developers Group (GDG), Cairo, Egypt

December 2024 - September 2025 • [↗](#)

- Delivered engaging sessions on Intro to Cybersecurity, Networking & OSI Model, Evolution of Windows Security, Cyber Kill Chain, and Intro to Web Pentesting. Helped participants build strong fundamentals and practical insights into modern cybersecurity concepts.

Skills

Programming Languages: Dart

State Management: BLoC, Cubit

Backend & APIs: RESTful APIs Integration, Firebase (Auth, Firestore, Storage, Push Notifications, Analytics)

Architecture & Patterns: MVVM, Clean Architecture

Tools & Platforms: GitHub, Git

Cybersecurity Tools: Burp Suite, Wazuh, SIEM (Splunk & ELK)

Networking Tools: Wireshark, Nmap

Projects

E-Commerce Store • [↗](#)

A full-featured e-commerce application built with Flutter and Firebase, designed to deliver a seamless and secure shopping experience. The app includes Firebase Authentication for secure user login and registration, real-time and cloud-hosted data management with Firestore, and efficient product browsing with category filtering and search functionality.

News App • [↗](#)

Built with Clean Architecture and Cubit, focusing on scalability and maintainability. Demonstrates best practices like layering (Data, Domain, Presentation), dependency injection, and reactive UI updates while consuming REST APIs. Also used local databases to store and manage bookmarked articles for offline access.

Maw3ed • [↗](#)

Maw'ed is a mobile application built with Flutter that helps users manage appointments efficiently with a smooth and modern user experience. The app features multi-language support (Arabic & English), dynamic theming (light/dark mode), and follows clean architecture with Bloc state management for scalability and maintainability. It also includes a smart notification system that reminds users of their upcoming meetings, tasks, and appointments, ensuring they never miss important events.

SafeScan • [↗](#)

SafeScan, a mobile application that allows users to analyze the reputation of links and domains and scan files directly from their devices. The app integrates APIs for malware detection and provides a clean, modern UI with responsive layouts and an intuitive user experience.

Languages

Arabic - Native

English - Proficient

Certificates

Mobile App Development with Flutter from Almdrasa

September 2025

- Comprehensive training program covering the fundamentals and advanced concepts of Flutter and Dart for building cross-platform mobile applications. Topics included UI/UX design, state management (BLoC), navigation, API integration, Firebase services, and application deployment for Android and iOS.

SOC L1 (TryHackMe)

January 2025

- Hands-on Cybersecurity Skills: Practical experience in cybersecurity, including penetration testing, incident response, and secure network configurations.

eLearnSecurity Certified Incident Responder (eCIR) from Netriders.Academy

December 2024 • [↗](#)

- Incident Response Fundamentals: Knowledge of the incident response lifecycle,

including preparation, identification, containment, eradication, recovery, and lessons learned.

- Network Forensics: Using tools like Wireshark to perform network traffic analysis and identify signs of

malicious activity or security breaches.

eLearnSecurity Junior Penetration Tester (eJPT) Prep from Netriders.Academy

April 2024 • [↗](#)

- Penetration Testing Fundamentals: Understanding the phases of a penetration test, including reconnaissance, scanning, exploitation, and reporting.
- Basic Web Application Security: Knowledge of web application vulnerabilities, including SQL Injection, XSS, and other OWASP Top 10 risks.
- System and Network Security: Understanding of security measures, privilege escalation, and post-exploitation techniques.
